► SPEEDING TO VICTORY: TEBIS CAD/CAM AIDS CHAMPIONSHIP SUCCESS.

THE TWO-MAN BOB:
 THE CAD SURFACE MODEL
 OF THE LEFT FRONT.

NC FINISHING PROGRAM
 FOR THE POSITIVE MOLD
 OF THE LEFT FRONT.

DIGITIZING THE SURFACE
 FOR THE SET POINT/ACTUAL
 VALUE COMPARISON.

Christoph Langen and his team had only one goal in the 95/96 bob racing season – to get the two-man and four-man bob races over as quickly as possible. How successful they were can be judged from the fact that they ended up as world European and German champions, won the World Cup in the two-man bob and were runners up in the four-man bob category.

One secret of their success is their bobs, which are designed and built by mmb Modellbau in Oberhaching, Germany using Tebis CAD/CAM Software. To be sure they were on to a winner right from the start, the mmb developers used **TEBIS CAD SOFTWARE** from the design stage onwards. And reaped the benefits of the system's outstanding surface design functionality.

When it came to construction, mmb was able to rely on **TEBIS CAM SOFTWARE** – the company's automill technology enabled quick, accurate and reliable computation of the NC programs.

And in the subsequent variance comparison between the CAD model and the milled version, **TEBIS CAQ SOFTWARE** showed that not only was the bob perfectly molded, its surface quality was also excellent.

PS: Tebis Version 3.1 offers even greater functionality. And Christoph Langen is looking forward to the next bob season ...
